

RAG Chatbot Testing – Knowledge Document

Use this document as the source knowledge for testing a Retrieval-Augmented Generation (RAG) chatbot. The chatbot should answer questions using the information below and should avoid inventing information that is not present.

1. Company Overview

- Company name: Web Prism Dynamics LLP.
- Founded: 2019.
- Headquarters: Kolkata, West Bengal, India.
- The company develops web applications, mobile applications, and AI-powered solutions.
- The company has a team of more than 25 engineers.

2. Services

- Web Development: React.js, Node.js, and Next.js.
- Mobile Development: React Native and Flutter.
- AI Solutions: AI chatbots, Retrieval-Augmented Generation (RAG), and related AI applications.
- UI/UX Design: User interface and user experience design for digital products.
- Cloud and DevOps: Cloud deployment, infrastructure, and DevOps-related services.

3. Industries

- The company works with clients and projects across healthcare, e-commerce, education, fintech, and SaaS.
- Solutions are customized according to the business requirements of each project.

4. RAG Chatbot

- A RAG chatbot combines a language model with a knowledge base.
- The knowledge base can contain company documents, FAQs, product information, and other approved business content.
- When a user asks a question, the system retrieves relevant information from the knowledge base and provides that information to the language model to generate the response.
- The chatbot should prioritize retrieved company information instead of relying on unsupported assumptions.

5. Example Product Features

- An AI chatbot can answer questions about company services and capabilities.
- An admin portal can be used to manage chatbot content and predefined questions.
- A chatbot can collect user information such as an email address when the business workflow requires it.
- User interests and interactions can be stored for sales or business analysis.

- A RAG system can be connected to business workflows so that certain requests can trigger actions such as consultation booking or email notifications.

6. Testing Rules

- Answers should be based on the information in this document.
- The chatbot should not invent company facts, prices, employee names, addresses, technologies, or services that are not provided here.
- If the requested information is not available in the knowledge base, the chatbot should clearly say that the information is not available rather than confidently making up an answer.
- Questions that combine multiple facts should be answered using the relevant information from multiple sections when possible.
